| | MEMORANDUM FOR: | Deputy Director for Administration | | | | |
|---------------|---|---|--|--|--|--|
| 25 X 1 | VIA: | Director of Information Technology | | | | |
| | FROM: | Chief, Development Group, OIT | | | | |
| | SUBJECT: | COMIREX Proposal | | | | |
| | | | | | | |
| 25X1 25X1 | proposal to cons briefed you on 1 repeat the brief | ber you requested that OIT CAMS personnel examine a COMIREX olidate the CAMS Processing and Tasking Segments into one. We 2 November on our conclusions. At that time you asked us to ing to DC/IC Staff. This was done on jor points briefed to | | | | |
| | o the COMIREX proposal is technically feasible. | | | | | |
| | o the proposal has substantial schedule risk. | | | | | |
| | o the ori million | ginally anticipated costs of \$25 million had increased to \$50 thus substantially reducing the originally estimated savings. | | | | |
| | o similar combini | high dollar savings can accrue to the government by not ng the systems and by descoping the Processing Segment. | | | | |
| | replace replaci | the Processing Segment running until its scheduled ment in 1993 without putting a substantial investment into ng the GIMS Data Base Management System is not without risk, manageable. | | | | |
| | personr | nmendation that we work together with OD&E and COMIREX nel to refine cost comparisons and come up with approach on how to proceed on the COMIREX proposal. | | | | |
| 25 V 1 | Processing and Talso a viable st turnkey approach be pursued either We pointed out h combining the sy evolutionary app | scussion that followed, we made the point that combining the Casking Segments is not only a money-savings strategy, but is crategy to evolve to a replacement CAMS system instead of the now being pursued. We said this evolutionary strategy could er as the primary development strategy, or as a contingency. However that from a technical perspective it is not clear that existens onto the Tasking Segment computer is the best proach. Others expressed the opinion that an evolutionary | | | | |
| 25X1 | strategy would i | not lead to a viable replacement system. | | | | |

| and COMIREX to | refine the cost | estimates of | the COMIREX 1 | rop | osal and, | if |
| possible, come | up with a joint | recommendatio | n on proceed: | ing. | | |

- 3. We did what was requested and met again with _______on 7 December. ______from COMIREX briefed that COMIREX has decided to withdraw their proposal. Their stated reason is they cannot fund the required development in FYs 88, 89 and 90, about \$8, \$19, and \$11 million respectively. The remainder of the \$50 million required would be funded out of savings past FY90. Yet to be discussed are COMIREX's plans for the Processing Segment beyond FY90. They could either continue to fund new function, or descope the program to accrue cost savings.
- 4. OD&E's primary contractor and TRW were under contract to OD&E for a competition to conceptualize and architect the CAMS replacement system (Requirements Management System RMS). That acquisition strategy has been changed to a government-directed cooperative agreement between the two companies. Up to this point, the development strategy had been a full-up turnkey approach. The contractors have been directed to examine evolutionary development strategies for RMS that would evolve from either a Processing Segment base or a Tasking Segment base. Thus three development approaches are being examined, the two evolutionary ones and a full-up turnkey approach.
- 5. Our goal throughout this exercise has been to help ensure that as much information as possible about the real development costs and risks of the COMIREX proposal be brought out and discussed. It is important to emphasize that we were not against the proposal per se. Rather we believe that combining the segments together and then building on that base is the preferred development strategy to get to a CAMS replacement system. This approach also solves some current Processing and Tasking Segment problems sooner than 1993. We hope that the contractor work noted in the preceding paragraph of examining evolutionary strategies will bear this approach out.
- 6. Bringing this matter to conclusion has been a harder job than it needed to be. While there are legitimate compartmentation concerns that properly hampered communications, it seems clear that inter-component rivalry has not served any of the players or the customers of CAMS well.
